How to View Scanned Plats Online
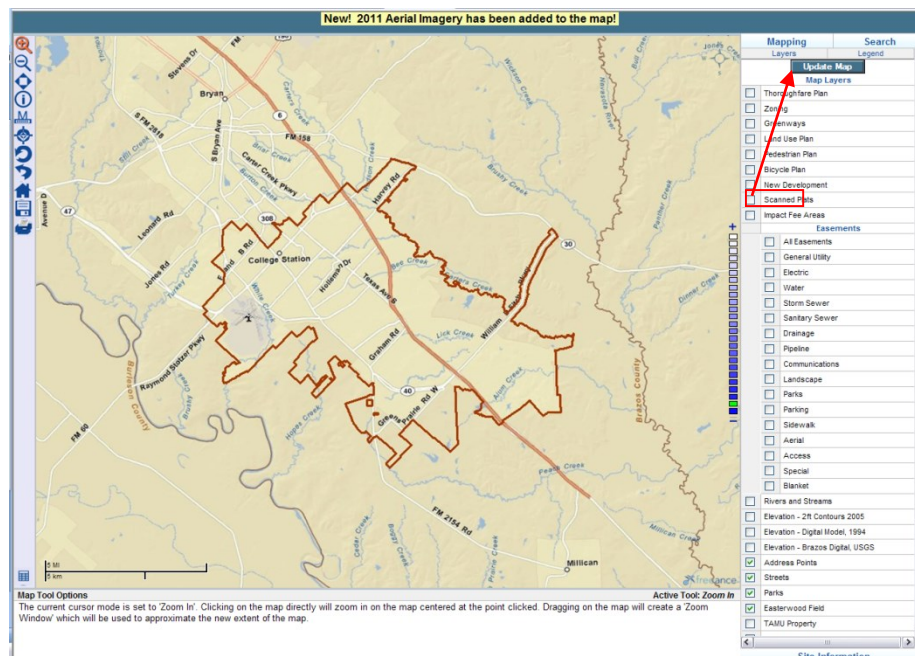

In conjunction with the online map, plats can be download here: http://scangis.cstx.gov/scangis/

Plats are stored in alphabetical order based on the name of the plat. For example "The Barracks II" would be stored under the folder "B", "Creek Meadows" under folder "C", etc. The plats on your screen can be saved by clicking on the Print Icon located on the tool bar on the upper left hand of the image. You will have to allow popups for this site to continue the download if you use popup blockers. If you have any problems you can contact P&DS 979.764.3759

First you will need to navigate to the City of College Station's GIS Webpage at http://www.cstx.gov/GIS.

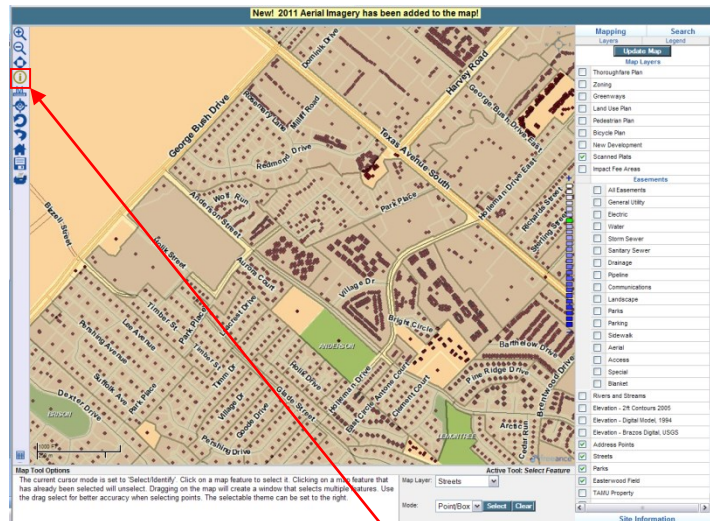

From this page you will select the Development Map. Accept the Map Disclaimer and it will bring you to the online mapping application.
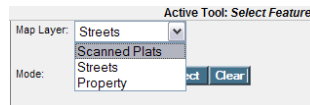

Next, you will to turn on the "Scanned Plats" Layer and push the "Update Map" button.

Once your map updates you can zoom to the area of the plat you are looking for. In this case I am going to be locating a plat for the Kapchinski Subdivision
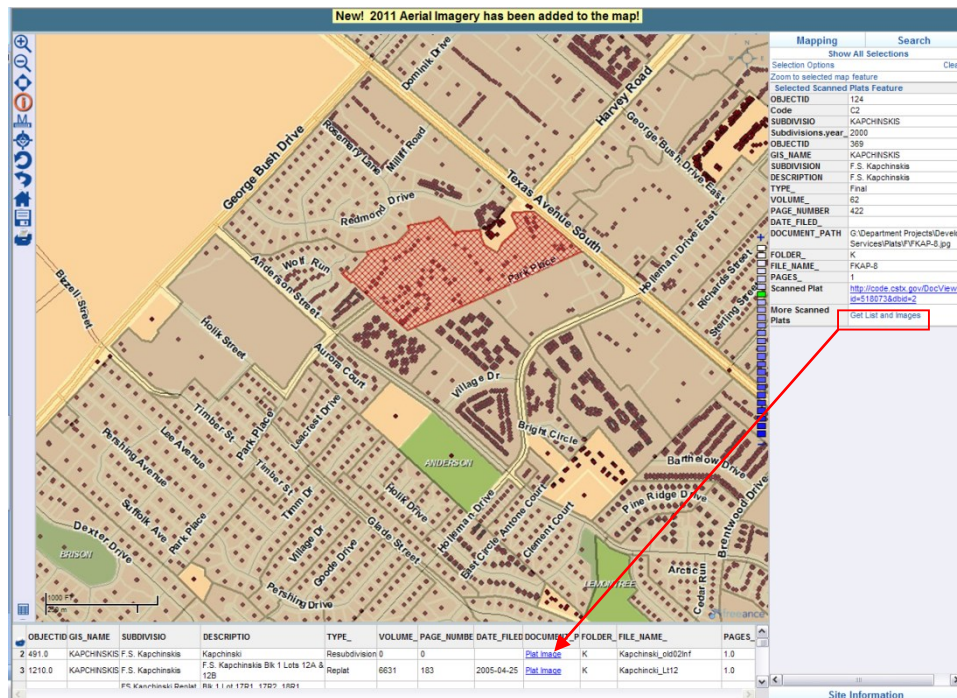

Once you find the "Scanned Plat" shape you want Click the ⓘ "Identify Button" located on the left hand side of the map. Once you click "Identify" your screen should look something like the above. Now at the bottom of the map you should see a drop down box labeled "Map Layer"
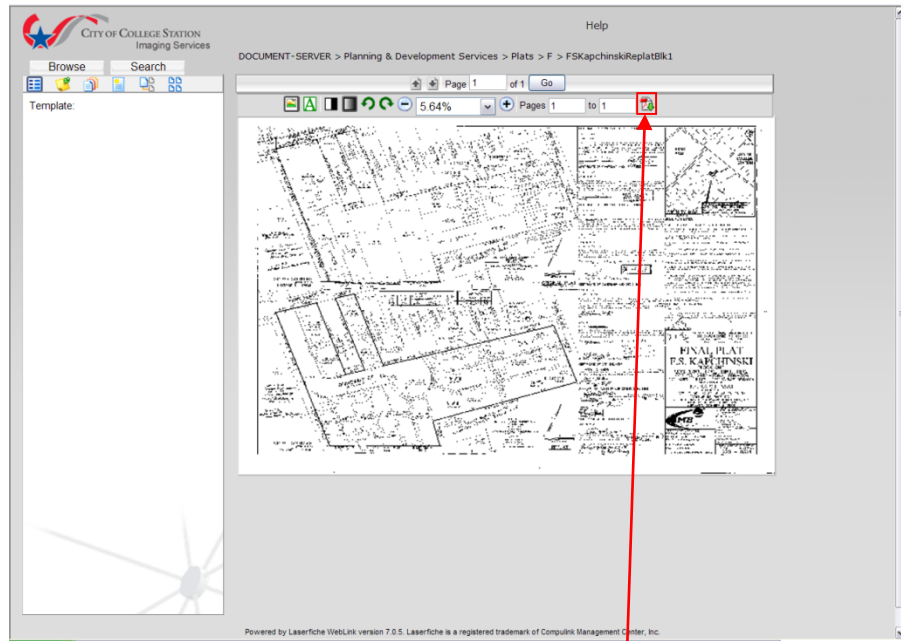

Click the drop down arrow and choose "Scanned Plats"

Now use the Identify tool on the left-hand side of the screen and drag a rectangle over the area of the plat that you want. Our Scanned Plats now handles areas with multiple plats by simply clicking "Get list of Images" on the right side of the map. At the bottom of the map you will see a list of plats with various information including Volume, Page, and date filed. Click "Plat Image"
